## AMENDMENTS TO THE CLAIMS

Please cancel Claims 1-50 without prejudice and insert therefore new Claims 51-60. This listing of claims will replace all prior versions, and listings, of claims in the application.

## **Listing of Claims:**

Claims 1-50 (canceled)

51. (New) A method for reducing the number of awakenings during sleep in a mammalian patient in need thereof that comprises administering to the patient a therapeutically effective amount of a T-type calcium channel antagonist,

wherein the T-type calcium channel antagonist possesses a selectivity for the T-type calcium channel relative to the L-type calcium channel of at least 100 fold as measured by the ratio of IC50 for the T-type calcium channel to the IC50 for the L-type calcium channel as evaluated by the voltage-clamp assay,

wherein the T-type calcium channel antagonist possesses a selectivity for the  $\alpha 11$  subtype T-type calcium channel relative to the  $\alpha 1G$  subtype T-type calcium channel of at least 10 fold as measured by the ratio of IC50 for the  $\alpha 11$  subtype T-type calcium channel to the IC50 for the  $\alpha 1G$  subtype T-type calcium channel as evaluated by the voltage-clamp assay,

wherein the T-type calcium channel antagonist possesses a selectivity for the  $\alpha 11$  subtype T-type calcium channel relative to the  $\alpha 1H$  subtype T-type calcium channel of at least 10 fold as measured by the ratio of IC50 for the  $\alpha 11$  subtype T-type calcium channel to the IC50 for the  $\alpha 1H$  subtype T-type calcium channel as evaluated by the voltage-clamp assay, and

wherein the T-type calcium channel antagonist possesses an IC50 for binding to the T-type calcium channel of 500 nM or less as evaluated by the T-type calcium channel antagonist voltage-clamp assay.

52. (New) The method of Claim 51 wherein the T-type calcium channel antagonist possesses a selectivity for the T-type calcium channel relative to the L-type calcium channel of at least 200 fold as measured by the ratio of IC50 for the T-type calcium channel to the IC50 for the L-type calcium channel as evaluated by the voltage-clamp assay.

- 53. (New) The method of Claim 52 wherein the T-type calcium channel antagonist possesses a selectivity for the T-type calcium channel relative to the L-type calcium channel of at least 500 fold as measured by the ratio of IC50 for the T-type calcium channel to the IC50 for the Ltype calcium channel as evaluated by the voltage-clamp assay.
- 54. (New) The method of Claim 51 wherein the T-type calcium channel antagonist possesses an IC50 for binding to the T-type calcium channel of 100 nM or less as evaluated by the T-type calcium channel antagonist voltage-clamp assay.
- 55. (New) The method of Claim 54 wherein the T-type calcium channel antagonist possesses an IC50 for binding to the T-type calcium channel of 50 nM or less as evaluated by the Ttype calcium channel antagonist voltage-clamp assay.
- 56. (New) The method of Claim 55 wherein the T-type calcium channel antagonist possesses an IC50 for binding to the T-type calcium channel of 1 nM or less as evaluated by the Ttype calcium channel antagonist voltage-clamp assay.
- 57. (New) The method of Claim 51 wherein the T-type calcium channel antagonist is a CNS-penetrant T-type calcium channel antagonist.
- 58. (New) The method of Claim 51 wherein the T-type calcium channel antagonist is an orally active T-type calcium channel antagonist.
- 59. (New) The method of Claim 58 wherein the T-type calcium channel antagonist is orally administered.
  - 60. (New) The method of Claim 51 wherein the patient is a human.
